1. Objective of the Course

The objective of the course is to introduce the students to the research frontier on the economics of international migration. We will review the literature on why individuals migrate, how they self-select into international migration, what are the consequences of migration decisions for migrants, sending and receiving countries and how policies shape all of these outcomes.

2. Organization

The first lecture of the week will be devoted to framing the main topic by discussing the main textbook (Borjas, 2014) and the relevant recent literature. In the second lecture of the week, students will be responsible for presenting and discussing a recent frontier research paper, with comments and questions from the professor and fellow students.

3. Evaluation

The grade will come from the final exam (40 per cent), the presentation or discussion of papers and in-class participation (40 per cent) and a referee report on a paper from this syllabus (20 per cent).

4. Schedule and Readings

The main textbook that we will follow is:

Borjas, George J. (2014). *Immigration Economics*. Harvard University Press. Cambridge, MA.

Each of the lectures will have mandatory additional readings, marked with *.

Week 1: Introduction. Data and the Global Gains from Migration.
