I- Data and Sources

Daily sovereign yield data come from Reuters. The respective tickers are:

BE10YT_RR, DE10YT_RR, IE10YT_RR, GR10YT_RR, ES10YT_RR, FR10YT_RR, IT10YT_RR,
NL10YT_RR, AT10YT_RR, PT10YT_RR, FI10YT_RR, MT10YT_RR, SI10YT_RR, SK10YT_RR, DK10YT_RR,
GB10YT_RR, BG10YT_RR, CZ10YT_RR, HU10YT_RR, LT10YT_RR, LV10YT_RR, PL10YT_RR,
RO10YT_RR, SE10YT_RR.

Daily equity indexes are provided by DataStream:

Germany - Equity/index - DAX 30 Performance Index - Historical close - Euro
France - Equity/index - France CAC 40 Index - Historical close - Euro
Athens Stock Exchange ATHEX Composite Index - Historical close - Euro
Standard & Poors/MIB Index - historic close - Euro
Portugal PSI-20 Index - historic close - Euro
Amsterdam Exchange (AEX) Index - historic close - Euro
Spain IBEX 35 Index - historic close - Euro
Belgium BEL 20 Index - historic close - Euro
Ireland Stock Exchange Overall (ISEQ) Index - historic close - Euro
Nordic Exchange OMX Helsinki (OMXH) Index - historic close - Euro
Austrian Traded Index (ATX) - Percentage change in the latest trade price or value from the historic close - Euro
Slovenian Stock Exchange (SBI) Index - Percentage change in the latest trade price or value from the historic close - Euro
Cyprus Stock Exchange General Index - Historical close - Euro
Malta Stock Exchange Index - Percentage change in the latest trade price or value from the historic close - Maltese lira
Slovakia SAX 16 Index - Percentage change in the latest trade price or value from the historic close - Euro
Bulgaria Stock Exchange SOFIX Index - Historical close, end of period - Bulgarian lev, provided by Bloomberg
Prague PX 50 Index - Historical close, end of period - Czech koruna
Nordic Exchange OMX Copenhagen (OMXC) 20 Index - Historical close, end of period - Danish krone
Nordic Exchange OMX Tallinn (OMXT) Index - Historical close, end of period - Estonian kroon
Nordic Exchange OMX Riga (OMXR) Index - Historical close, end of period - Latvian lats
Nordic Exchange OMX Vilnius (OMXV) Index - Historical close, end of period - Lithuanian litas
Budapest Stock Exchange BUX Index - Historical close, end of period - Hungarian forint
Warsaw Stock Exchange General Index - Historical close, end of period - Polish zloty
Romania BET Composite Index (Local Currency) - Historical close, end of period - Romanian leu
Nordic Exchange OMX Stockholm 30 (OMXS30) Index - Historical close, end of period - Swedish krona
Financial Times Stock Exchange (FTSE) 100 Index - Historical close, end of period - UK pound sterling

Table A1 – Summary of rating announcements

Country	Announcements since 1995				Starting date and total announcements captured		
	Upgrade	Downgrade	Positive Outlook	Negative Outlook	Yields	CDS	Equity
Euro Area							
Austria	0 (0,0,0)	0 (0,0,0)	0 (0,0,0)	0 (0,0,0)	2 Jan 1995 (0)	6 Jan 2004 (0)	1 Jan 2002 (0)
Belgium	2 (0,0,2)	1 (0,0,1)	1 (1,0,1)	0 (0,0,0)	10 May 1996 (4)	5 Jan 2004 (2)	1 Jan 2002 (3)

Note: This table shows the estimation of the coefficients of the announcement dummies when included in specification of the conditional variance in the EGARCH model in (5). The t-statistics for the statistical significance of the estimated coefficients are reported between parentheses. In this table "****", "***", "**" represents statistical significance at 1%, 5%, and 10%, respectively. In square brackets is the number of upgrades and downgrades in the sample, respectively.

Note: this table reports in-sample and out-of-sample predictions of the value-at-risk with and without using credit rating downgrades information for estimating volatilities (equations (15) and (16)), using volatilities that are filtered based on: (i) GJR-GARCH model (Glosten et al., 1993); (ii) EGARCH model with Gaussian distribution; and (iii) EGARCH model with autoregressive terms in the mean equation. In this table "η" represents the risk aversion parameter. The value-at-risks are within two weeks of a downgrade. These value-at-risks correspond to each unit nit invested in the mean-variance portfolios. In brackets is the percentage of value-at-risk violations.

Note: This table reports in-sample and out-of-sample predictions of the average portfolio returns, average portfolio standard deviation and average value-at-risk with and without using credit rating downgrades information for estimating volatilities (equations (15) and (16)) and the equally weighted portfolio. In this table " η " represents the risk aversion parameter. The value-at-risks are within two weeks of a downgrade. These value-at-risks correspond to each unit invested in the mean-variance portfolios. In brackets is the percentage of value-at-risk violations.

Table A14 – Financial gain in annualized basis points (bp) of credit rating downgrades information (regression without lagged volatility)

	Observations	$\eta=3$	$\eta=5$	$\eta=7$
Relative to portfolio without rating information				
Stock Market				
<i>In-sample prediction</i>	2562(554)	5416.0	3145.5	2165.1
<i>Out-of-sample prediction</i>	518 (289)	23889.5	13824.9	9514.2
Bond Market				
<i>In-sample prediction</i>	2562(446)	2251.1	1264.0	847.3
<i>Out-of-sample prediction</i>	518 (287)	110004.6	65243.2	46064.6

Note: This table reports in-sample and out-of-sample predictions of the financial gain of credit rating downgrades information in a regression without lagged volatility. The gain is in annualized basis points (bp). In this table " η " represents the risk aversion parameter. These financial gains are within two weeks of a downgrade. Between parentheses is the number of periods corresponding to two weeks after a downgrade.
